

SURVEYING

Our wireless networks are tailor-made and designed to suit the unique needs of each property.

During the tender process, we'll arrange a comprehensive site survey to make sure your new network spans every inch of your site and delivers a great customer experience for your residents, staff, and guests.

We'll assess the best locations for our cabinets, cables, and devices to make sure our equipment is unobtrusive yet effective.

We'll need access to typical rooms to complete our designs, but we'll work with you to ensure our visits go almost unnoticed.

By analysing floor plans and heatmaps and using our wireless analysis tools and predictive models, we'll design a network that meets your needs and delivers a service you can rely on.
