WiFi and managed networks
that deliver the best
connectivity experience

Connectivity Redefined

At Wifinity, we design, install, and operate connectivity solutions for businesses that need to provide internet access at work or to their customers.

Our connectivity enables people to collaborate, innovate, roam and communicate across government facilities, holiday resorts, managed apartments, educational campuses, and many more.

An End-to-End Solution

Our in-house engineers survey, design and install your WiFi to make sure you can get online with ease, and you're completely satisfied.

We use the most up-to-date equipment, including the latest generation infrastructure cabling and WiFi 6 access points, future-proofing your investment as demand and technologies evolve.

We monitor our network capacity 24/7/365 and proactively fix any faults to minimise the impact on customers. Our security cleared field engineers can be deployed at any time if needed. And our support doesn't end there. Our multi-disciplined account management team will integrate as part of your contractual team.

Secured networks

No two businesses are the same, so we partner with you to design the perfect solution that meets your needs.

Corporate Network

Whether you want wireless, wired, or a combination of both, we'll design a network solution that meets the needs of your business.

With our Govwifi solution, customers are able to roam across all enabled public sector establishments on their own private network instead of having to connect to an unsecure public network.

Drive innovation in your company by making the most of the connected office and IoT technology (environmental sensors / monitors etc), as well as setting up private networks, content filtering, dedicated bandwidth and secure firewalls.

PAYG WiFi

Our Pay As You Go WiFi enables customers to access super-fast WiFi for as long or as short as they need. We offer daily, weekly and monthly rolling contracts and handle all billing and customer contact.

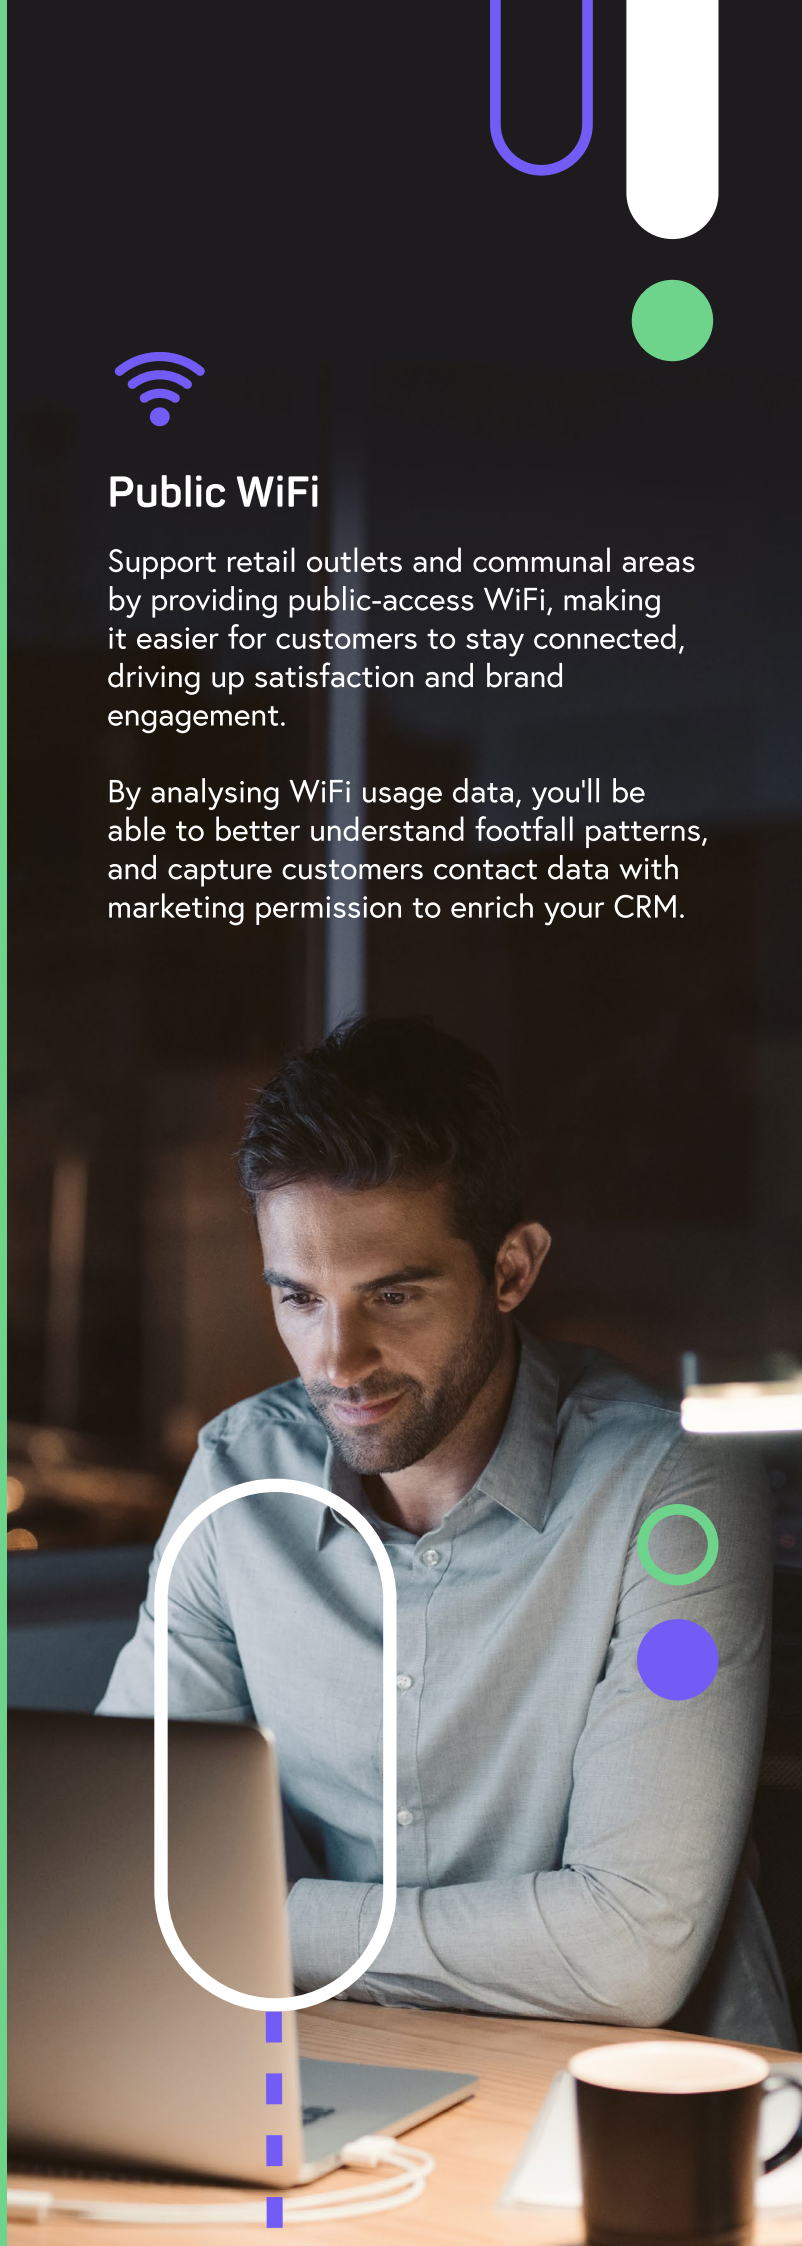

With white-labelled or Wifinity-branded options available, you choose the option that works best for you.

Public WiFi

Support retail outlets and communal areas by providing public-access WiFi, making it easier for customers to stay connected, driving up satisfaction and brand engagement.

By analysing WiFi usage data, you'll be able to better understand footfall patterns, and capture customers contact data with marketing permission to enrich your CRM.
